FNB APP HACKATHON · YOUTH ENTREPRENEURSHIP & SMALL BUSINESS GROWTH

AdminOS

The business OS, app-native today with WhatsApp next, that takes a young South African founder from “I have an idea” to “I run a business”.

Mirembe Muse (Pty) Ltd · East London, Eastern Cape · Nandawula Regine, founder
Live at adminos.co.za · github.com/Nanda-Regine/AdminOS

THE PROBLEM

Starting a business is the easy part. Staying alive is what nobody teaches.

💸 Cash is trapped

Customers owe money, the founder is too polite (or too busy) to chase it, and rent is due on the 1st.

⚠️ Deadlines nobody warned them about

SARS, CIPC and COIDA penalties arrive before the founder knows the deadline existed.

📓 No records, no funding

A WhatsApp chat and a notebook can't show a lender, a funder or a bank that the business is real.

📱 Five apps they can't afford

Invoicing here, payroll there, chat somewhere else — built for US businesses, not for load-shedding and prepaid data.

THE IDEA

One loop. Get paid → stay compliant → know your numbers → grow.

1

Get paid

Invoice in seconds. An AI agent prepares polite reminders, oldest debt first, and keeps the firm ones for your approval.

2

Stay compliant

Every SARS, CIPC and COIDA deadline pre-loaded — with the real penalty for missing it.

3

Know the numbers

A daily brief, a health score and accountant-ready exports, categorised from day one.

4

Grow

Goals, bookings, stock, staff and payroll — the business scales without the admin scaling with it.

Every step produces clean data. Clean data is what turns a hustle into something a bank can say yes to.

THE SOLUTION

One workspace for the whole founder journey.

The owner on the web app. The team on the Android staff app. The accountant gets clean exports. One clean data spine underneath.

1 · Get paid

- ✓ Invoices & receipts
- ✓ Quick Sale for cash
- ✓ Debt recovery
- ✓ Bank statement reconcile

2 · Stay compliant

- ✓ SARS · CIPC · COIDA calendar
- ✓ Payroll: PAYE, UIF, SDL
- ✓ POPIA consent & opt-out
- ✓ Licences & deadlines

3 · Know the numbers

- ✓ Health score & daily brief
- ✓ 90-day cash forecast
- ✓ Expenses & payables
- ✓ Accountant exports

4 · Grow

- ✓ Bookings & customers
- ✓ Stock & suppliers
- ✓ Staff, leave & tasks
- ✓ Goals & progress

AI drafts, the owner decides

Gentle actions can run on their own. Anything firm or money-moving waits for one tap from the owner.

Role-aware

Owner, manager and staff each see only what their job needs.

Built for SA

Rands, SARS, POPIA and four languages. Tested across 7 industry personas.

USER JOURNEY · A WEEK WITH THABO

A week with Thabo, hardware trader in East London.

Illustrative story built from our demo business, “Mzansi Test Traders”. All figures are sample data.

Mon 07:30 — Command Center

He sees what matters

“R 14 134 is stuck in collections” and 11 decisions are waiting. One screen, not five apps.

Mon 08:00 — Cash Cockpit

He knows who to chase

The oldest debt comes first. Gentle follow-ups are drafted; firm ones wait for his approval.

Tue — Invoices

A walk-in pays cash

Quick Sale. A receipt in seconds, and the sale is in the books.

Wed — Bank & Reconcile

He closes his bank loop

Uploads his FNB statement. Lines categorise themselves, a payment matches its invoice, one tap settles it.

Thu — Compliance · Payroll

He beats the deadline

EMP201 is due on the 7th. He sees the date and the penalty, then runs payroll with PAYE, UIF and SDL.

Fri — Reports

His accountant is happy

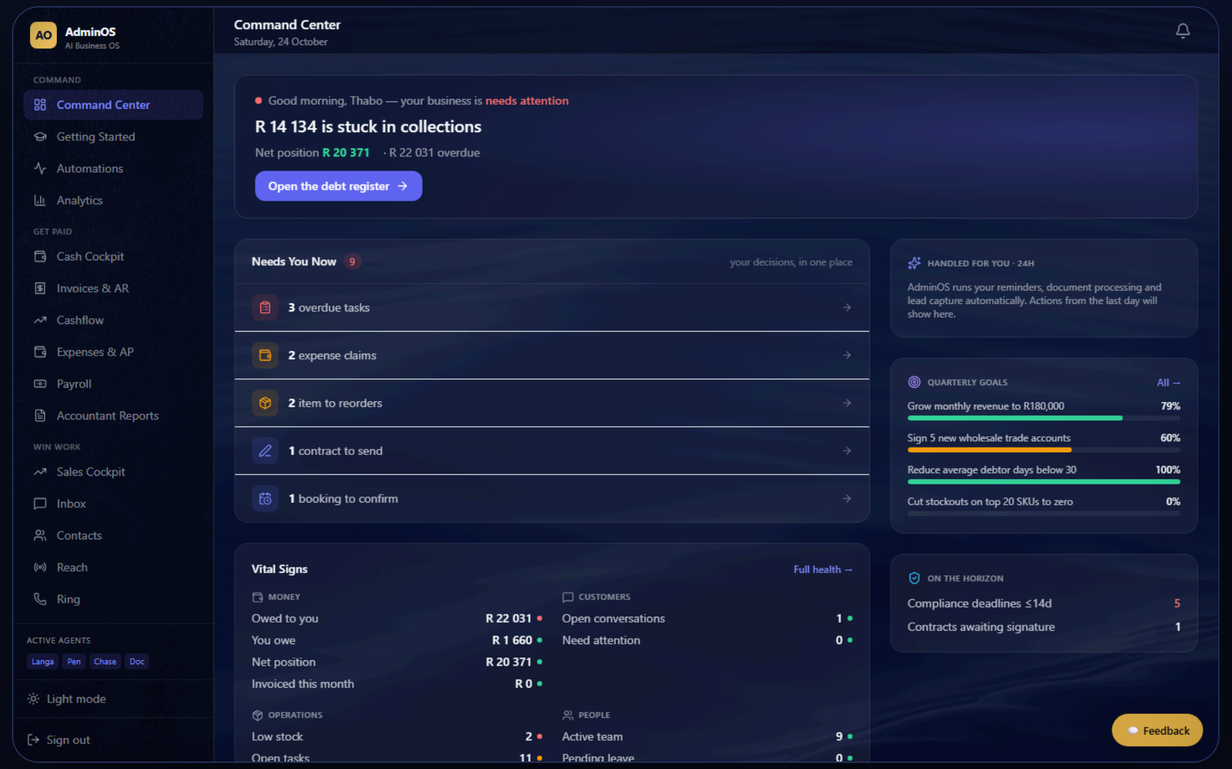

The daily brief and health score are green. Income statement, VAT and journal export in a click.

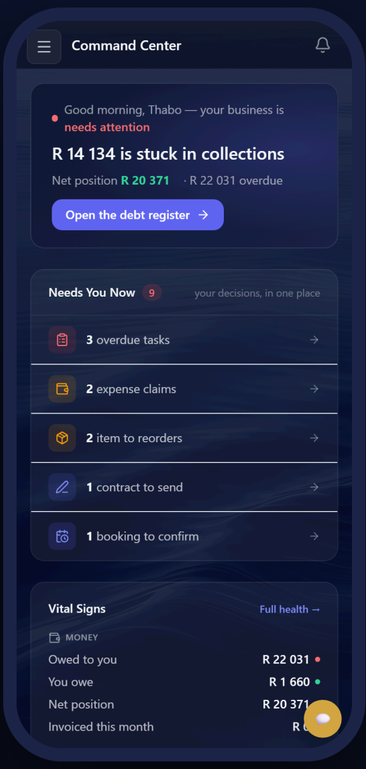

From a notebook to a clean, categorised record a lender can read.

THE PRODUCT · LIVE TODAY

Every morning, one screen instead of five apps.

- ✓ What needs a decision *right now*
- ✓ Cash owed, overdue and stuck
- ✓ Goals, compliance and team at a glance
- ✓ Built mobile-first, works on a 390px Android

AdminOS · github.com/Nanda-Regine/AdminOS

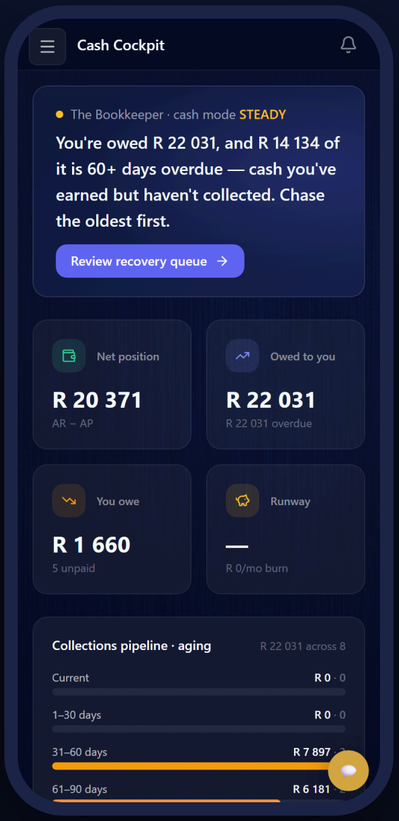

1 · GET PAID

The cash you've already earned — collected.

Cash Cockpit tells a founder plainly what they're owed, what's stuck, and who to chase first.

- ✓ Branded tax invoices & payment receipts
- ✓ Quick Sale for cash and walk-in customers
- ✓ 6-stage debt recovery: gentle reminders first, firm notices wait for your approval
- ✓ Every rand categorised to a chart of accounts

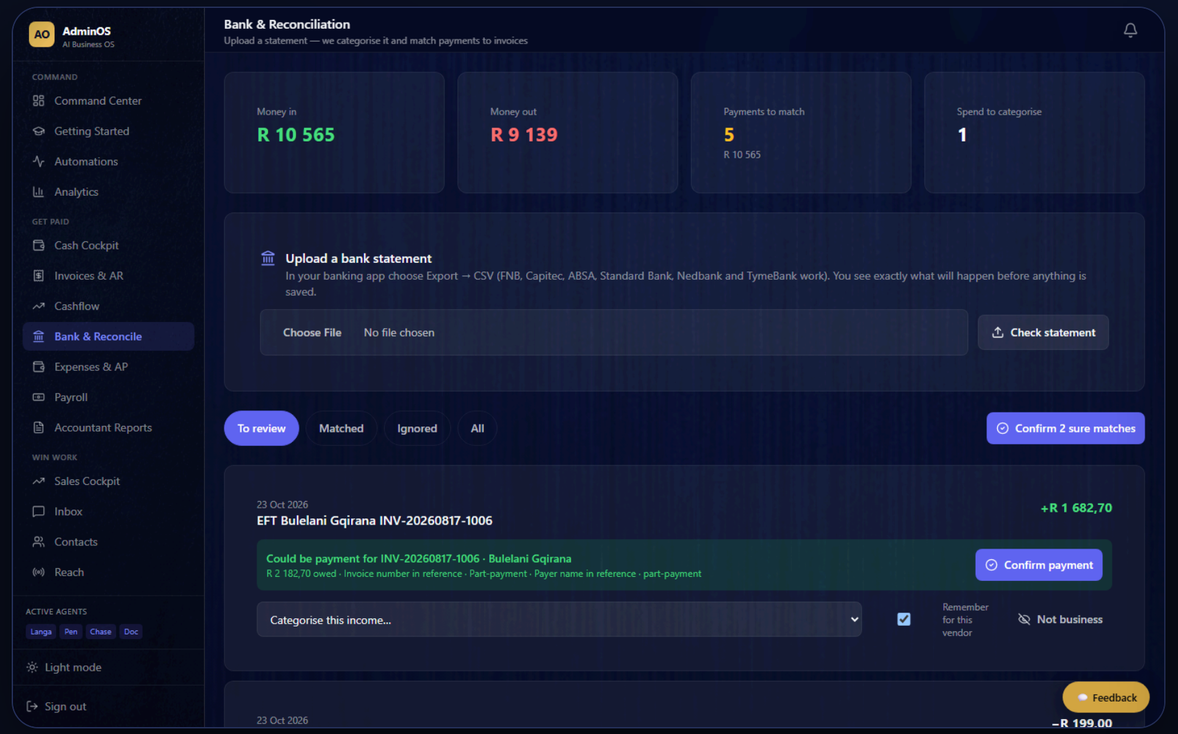

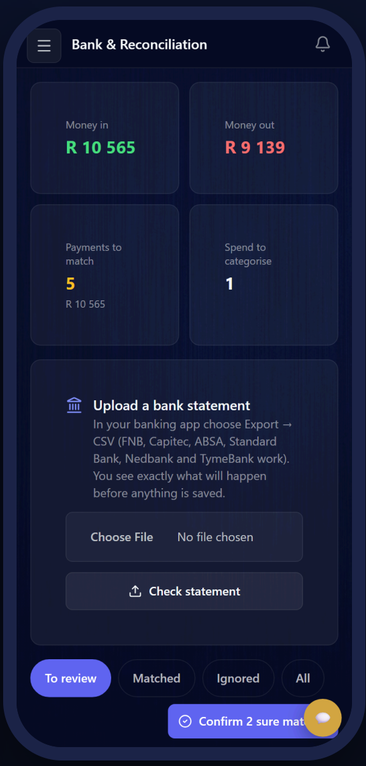

AdminOS · github.com/Nanda-Regine/AdminOS

1 · GET PAID — THE BANK LOOP

Your bank statement, closed into the books.

- ✓ Upload a CSV from FNB, Capitec, ABSA, Standard Bank, Nedbank or TymeBank
- ✓ Preview first; spending sorts itself and learns your vendors
- ✓ Payments are matched to invoices by number, payer name and exact amount
- ✓ One tap settles the invoice
- ✓ Look-alikes and part-payments are flagged, never guessed

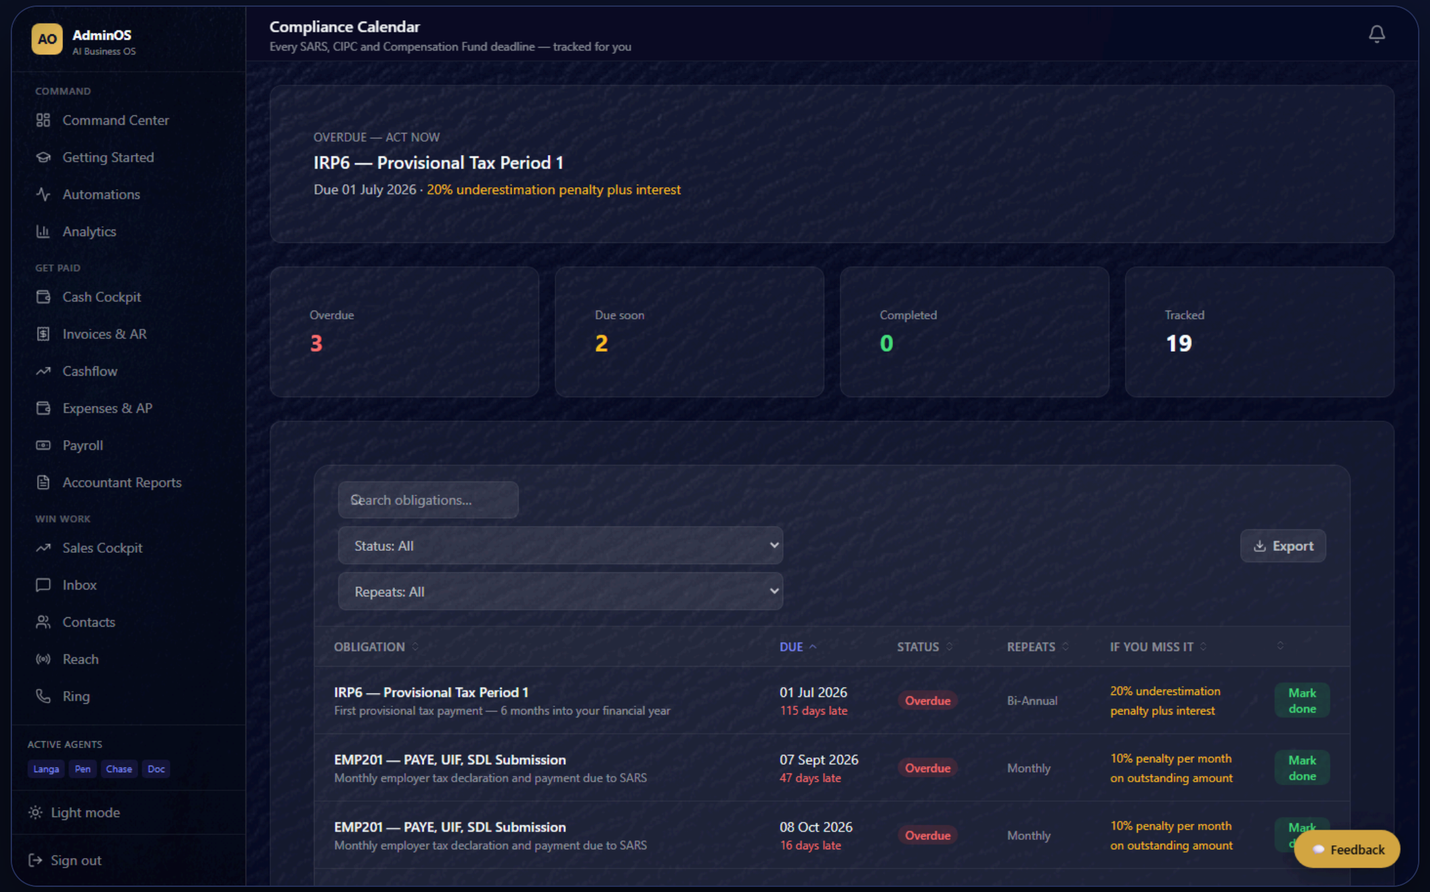

2 · STAY COMPLIANT

The fear every founder has — answered in one click.

- ✓ EMP201, EMP501, IRP6, ITR14, COIDA and CIPC deadlines, pre-loaded
- ✓ Dates built on SARS-verified rules, rolled forward monthly
- ✓ The actual penalty for missing each one
- ✓ POPIA consent built into every broadcast

Built around South African employer and tax deadlines from day one.

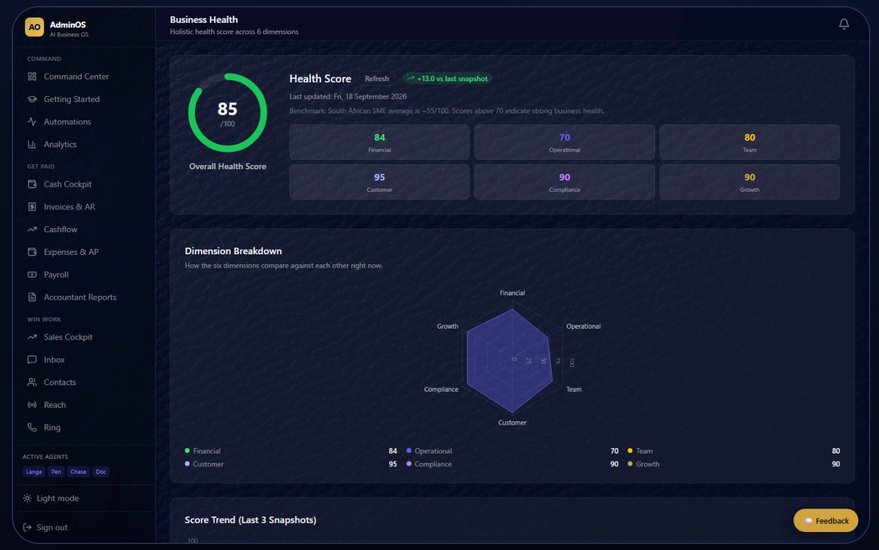

AdminOS · github.com/Nanda-Regine/AdminOS

3 · KNOW YOUR NUMBERS

Books in order from day one.

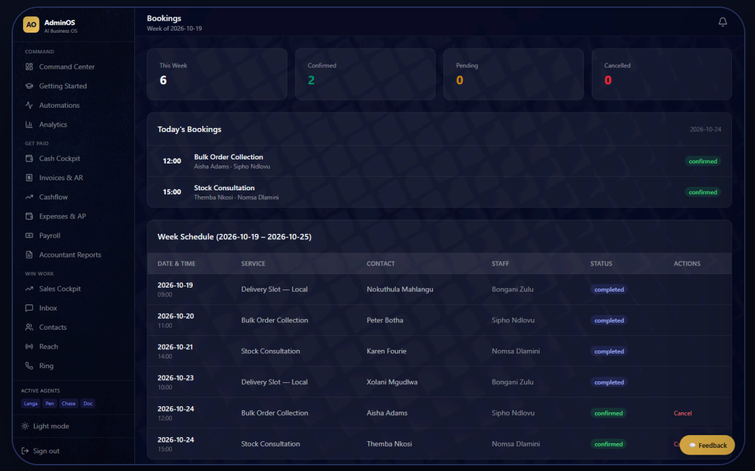

- ✓ Business health score and a daily brief
- ✓ A 90-day cash forecast, labelled as an estimate
- ✓ Accountant-ready exports: income statement, VAT, journal CSV
- ✓ Payroll with PAYE, UIF and SDL

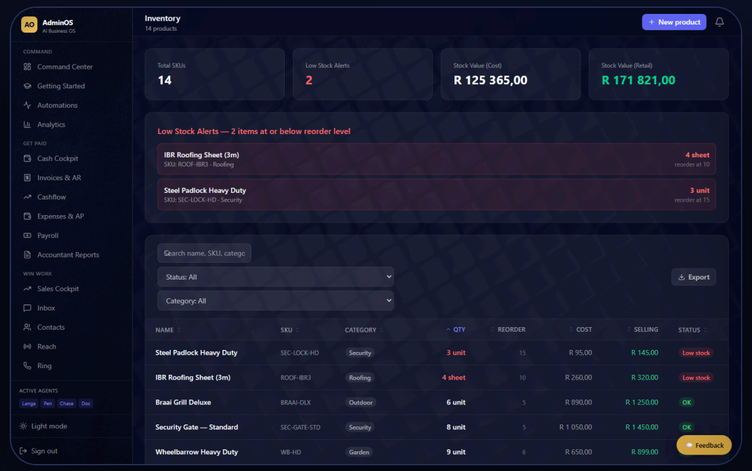

AdminOS · github.com/Nanda-Regine/AdminOS

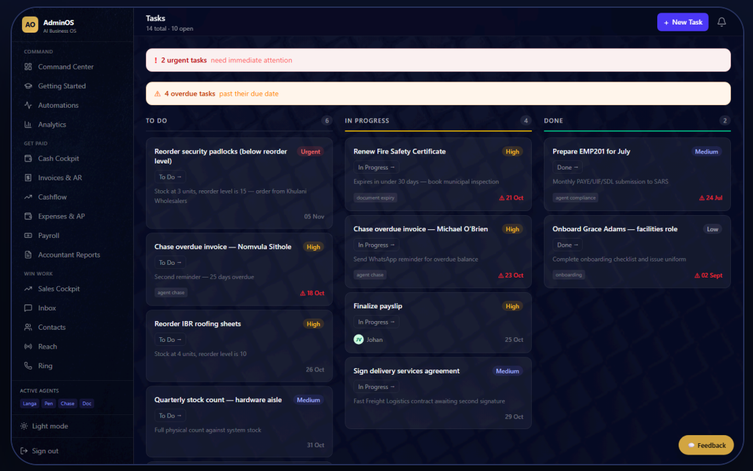

Run the whole business — not just the books.

Bookings & customers — a booking diary with confirmations; a 24-hour reminder is built in for when WhatsApp is connected.

Stock & suppliers — reorder alerts and a B-BBEE supplier scorecard.

Team & tasks — staff, leave, tasks and goals with progress.

BUILT FOR HOW SOUTH AFRICANS ACTUALLY WORK

Designed for the mid-range Android on prepaid data.

App-native today

Everything runs in the app on a mid-range Android. WhatsApp, the channel everyone already uses, is our next step.

4 languages

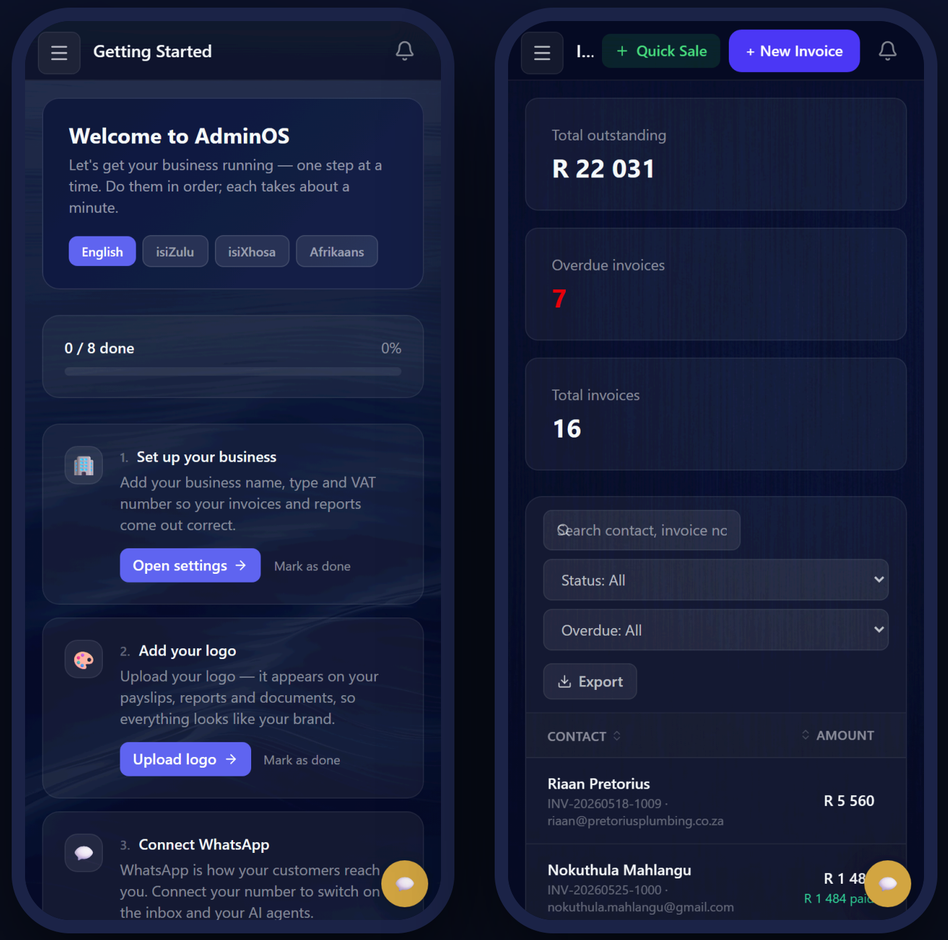

English, isiZulu, isiXhosa and Afrikaans — including the onboarding guide.

Built for load-shedding

The staff app queues clock-ins offline and retries when the signal returns.

Staff app

Expo Android app being prepared for Google Play and Huawei AppGallery.

AdminOS · github.com/Nanda-Regine/AdminOS

TECHNICAL ARCHITECTURE

Server-side by design. The browser never holds the keys.

Web app (PWA)
Next.js 16 · React 19 · Tailwind 4 · mobile-first

Android staff app
Expo / React Native · clock-in queues offline

WhatsApp
Meta Cloud API · built, connecting next

▼ HTTPS ▼

Cloudflare Workers · Next.js App Router API
Every route: signed-in user → tenant lookup → role/permission check → Zod-validated input → server-only data access. Rate-limited; webhooks signature-verified.

▼ server-side only ▼

Supabase
Postgres + Auth. Row-level security on all 110 tables; bank tables server-only

Inngest
40+ background jobs: reminders, recovery, roll-forwards, daily brief

Anthropic Claude
Haiku for light tasks, Sonnet for reasoning. Per-tenant budget caps

Upstash Redis
Rate limits and usage counters

Also wired in: **Paystack billing (ZAR)** · **PostHog analytics (after consent)** · **Sentry errors** · **CI: type-check + tests on every push**

Background jobs and AI calls run on the server only. The browser never receives the database service key, the AI key or any other secret, and bank, payment and payroll data are read by the server after the role check.

RESPONSIBLE AI

AI drafts. The founder decides.

A · B · C

Three levels of trust

For each decision the owner picks: A acts and reports, B drafts for one-tap approval, C only alerts. Eight decisions are covered today.

1–3

Only courteous reminders can send themselves

Debt follow-ups run in six stages. Stages 4–6 are drafted for the owner and never auto-sent. A content guard blocks threats and legal language.

Zero

Direct database access for AI

The model gets only the text it needs. Inputs are sanitised against prompt injection, and every call is metered.

Capped

A budget the owner can trust

Per-business AI cost caps are enforced on the server, so a runaway prompt cannot become a surprise bill.

PROOF IT'S REAL

Not a prototype. A product in production.

50+
dashboard screens, live at adminos.co.za

238
automated tests passing

122/122
checks passed walking 7 industry personas on production (last full run, 6 Oct)

40+
background automations (reminders, recovery, rollovers)

🔒 Tenant isolation

Row-level security on every table; bank lines reachable by the server only; a regression gate checks who can see what, per role.

👩🏾‍💼 A first beta user

A Johannesburg video-production founder has been trialling it since August.

⚖️ POPIA by design

Consent layer for outbound messaging; no raw database errors ever reach users.

TRUST · SECURITY & POPIA

Your customers' data stays yours — and apart.

🔒 One business can never see another

- ✓ Row-level security on every table; with the public database key, no business's data can be read (checked 26 Oct 2026)
- ✓ Bank lines are reachable by our server only, never from a browser; payroll and invoices only by that business's own signed-in users
- ✓ Every request is role-checked before any data is read; staff see only their own day
- ✓ A regression check walks 7 industry personas on production: 122 of 122 checks passed
- ✓ Signed webhooks, safe redirects, security patches applied; no raw database errors reach users

⚖️ POPIA, built in

- ✓ Consent checked before any outbound marketing message; customers can opt out
- ✓ Soft-delete and an audit trail on key changes; accounts can be deleted and purged
- ✓ Personal data minimised: AI helpers get no direct database access
- ✓ Privacy policy being updated to list every operator and cross-border transfer (s72) In progress

WHERE A BANK MAKES THIS UNSTOPPABLE

From “books in order” to “ready for credit.”

CAPABILITY	WHAT IT UNLOCKS FOR A YOUNG FOUNDER	STATUS
Invoices, receipts & cash sales	A clean, categorised record of every rand earned	Live
Compliance calendar & payroll	Proof the business is registered, tax-aware and trading properly	Live
Bank-statement import & reconciliation	Upload an FNB, Capitec, ABSA, Standard Bank, Nedbank or Tyme CSV; lines categorise themselves and payments settle the invoices they paid	Live
Pay-from-invoice	Customers pay the invoice from their banking app; it marks itself paid	Next
Credit-readiness profile	Consented, shareable view of cash flow, compliance and trading history for lenders	Next

The data flywheel: the more a founder runs through AdminOS, the more provable — and bankable — the business becomes.

BUSINESS MODEL

Priced for a founder's first R349, not an enterprise budget.

Solo

R349

per month · 1 person

Grow

R899

up to 5 staff · AI agents included

Operate

R1,999

up to 20 staff · payroll & compliance

Scale

R3,999

up to 100 staff · multi-branch

14-day free trial · add-ons: AI voice receptionist, broadcasts (once WhatsApp is connected), client portal, extra languages · billing in ZAR.

Distribution: bank, incubator and funder partnerships — one partner brings a cohort of founders onto the platform.

MARKET VALIDATION

Early signal is strong. Here is how we prove it.

What we have heard so far

- ✓ **FNB hackathon panel, 2 of 2:** “can use” and “can buy”. One would pay the full price, one half price
- ✓ “Your strong point is the pricing… unique and specific to South Africa.”
- ✓ Our first beta founder, in Johannesburg, has been trialling AdminOS since August
- ✓ Fair challenge from the panel: similar tools exist. Ours is built and priced for South Africa from day one: ZAR, SARS, POPIA, four languages, WhatsApp next

What we test next Planned

- ✓ A short “what would you pay?” survey to every beta founder, per tier
- ✓ Three pilot cohorts with incubators and funders, tracking trial → paid
- ✓ Half-price signal: test a lighter Solo tier and an annual discount against the R349 plan
- ✓ Measure what matters: days from invoice to cash, owner hours saved, 90-day retention

THE ASK

Help us put a business OS in the pocket of every young South African founder.
