FNB APP HACKATHON · YOUTH ENTREPRENEURSHIP & SMALL BUSINESS GROWTH

AdminOS

The WhatsApp-native business OS that takes a young South African founder from “I have an idea” to “I run a business”.

Mirembe Muse (Pty) Ltd · East London, Eastern Cape · Nandawula Regine, founder
Live at adminos.co.za · github.com/Nanda-Regine/AdminOS

THE PROBLEM

Starting a business is the easy part. Staying alive is what nobody teaches.

💸 Cash is trapped

Customers owe money, the founder is too polite (or too busy) to chase it, and rent is due on the 1st.

⚠️ Deadlines nobody warned them about

SARS, CIPC and COIDA penalties arrive before the founder knows the deadline existed.

🗄️ No records, no funding

A WhatsApp chat and a notebook can't show a lender, a funder or a bank that the business is real.

📱 Five apps they can't afford

Invoicing here, payroll there, chat somewhere else — built for US businesses, not for load-shedding and prepaid data.

THE IDEA

One loop. Get paid → stay compliant → know your numbers → grow.

1

Get paid

Invoice in seconds. An AI agent chases the oldest debt first, politely, on WhatsApp.

2

Stay compliant

Every SARS, CIPC and COIDA deadline pre-loaded — with the real penalty for missing it.

3

Know the numbers

A daily brief, a health score and accountant-ready exports, categorised from day one.

4

Grow

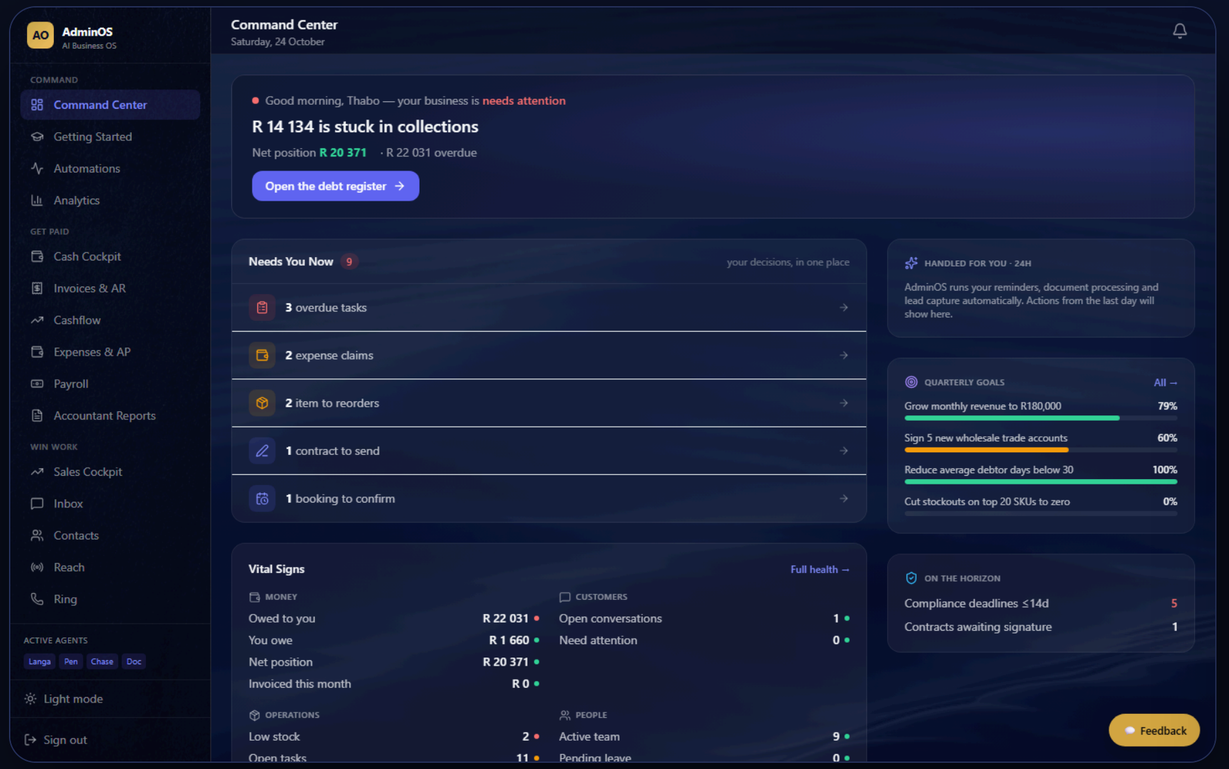

Goals, bookings, stock, staff and payroll — the business scales without the admin scaling with it.

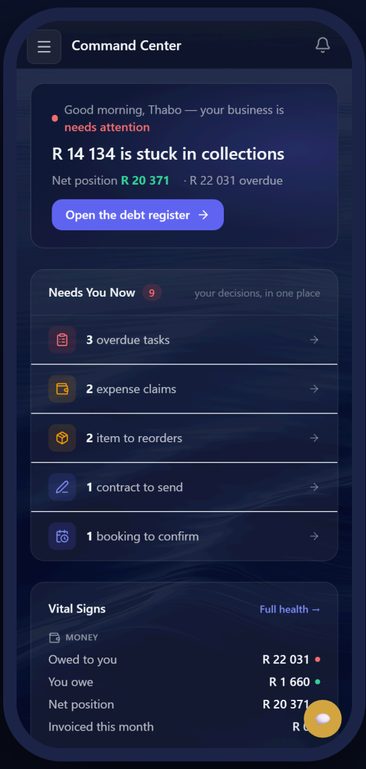

Every step produces clean data. Clean data is what turns a hustle into something a bank can say yes to.

THE PRODUCT · LIVE TODAY

Every morning, one screen instead of five apps.

- ✓ What needs a decision *right now*
- ✓ Cash owed, overdue and stuck
- ✓ Goals, compliance and team at a glance
- ✓ Built mobile-first, works on a 390px Android

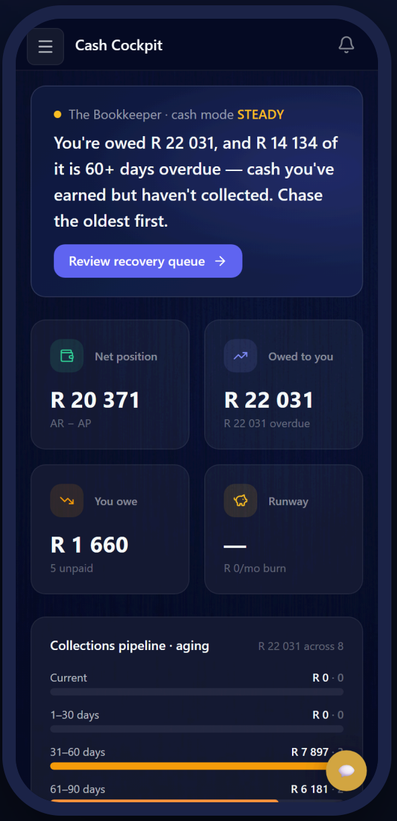

1 · GET PAID

The cash you've already earned — collected.

Cash Cockpit tells a founder plainly what they're owed, what's stuck, and who to chase first.

- ✓ Branded tax invoices & payment receipts
- ✓ Quick Sale for cash and walk-in customers
- ✓ 5-tier automated debt recovery agent
- ✓ Every rand categorised to a chart of accounts

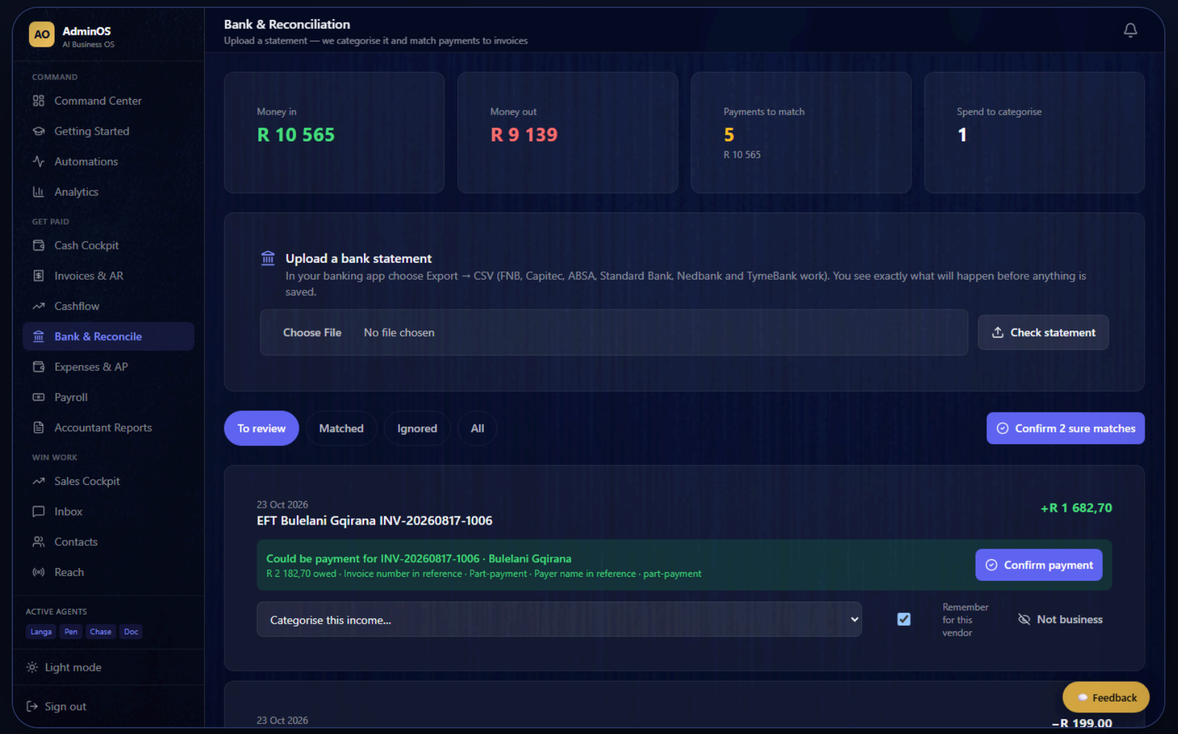

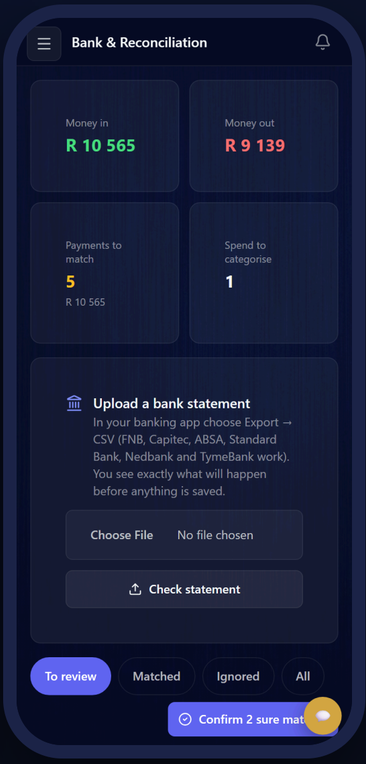

1 · GET PAID — THE BANK LOOP

Your bank statement, closed into the books.

- ✓ Upload a CSV from FNB, Capitec, ABSA, Standard Bank, Nedbank or TymeBank
- ✓ Preview first; spending sorts itself and learns your vendors
- ✓ Payments are matched to invoices by number, payer name and exact amount. It learns who pays you, even from a personal account
- ✓ One tap settles it, or let AdminOS settle the sure ones. Wrong match? **Undo**
- ✓ Look-alikes and part-payments are flagged, never guessed

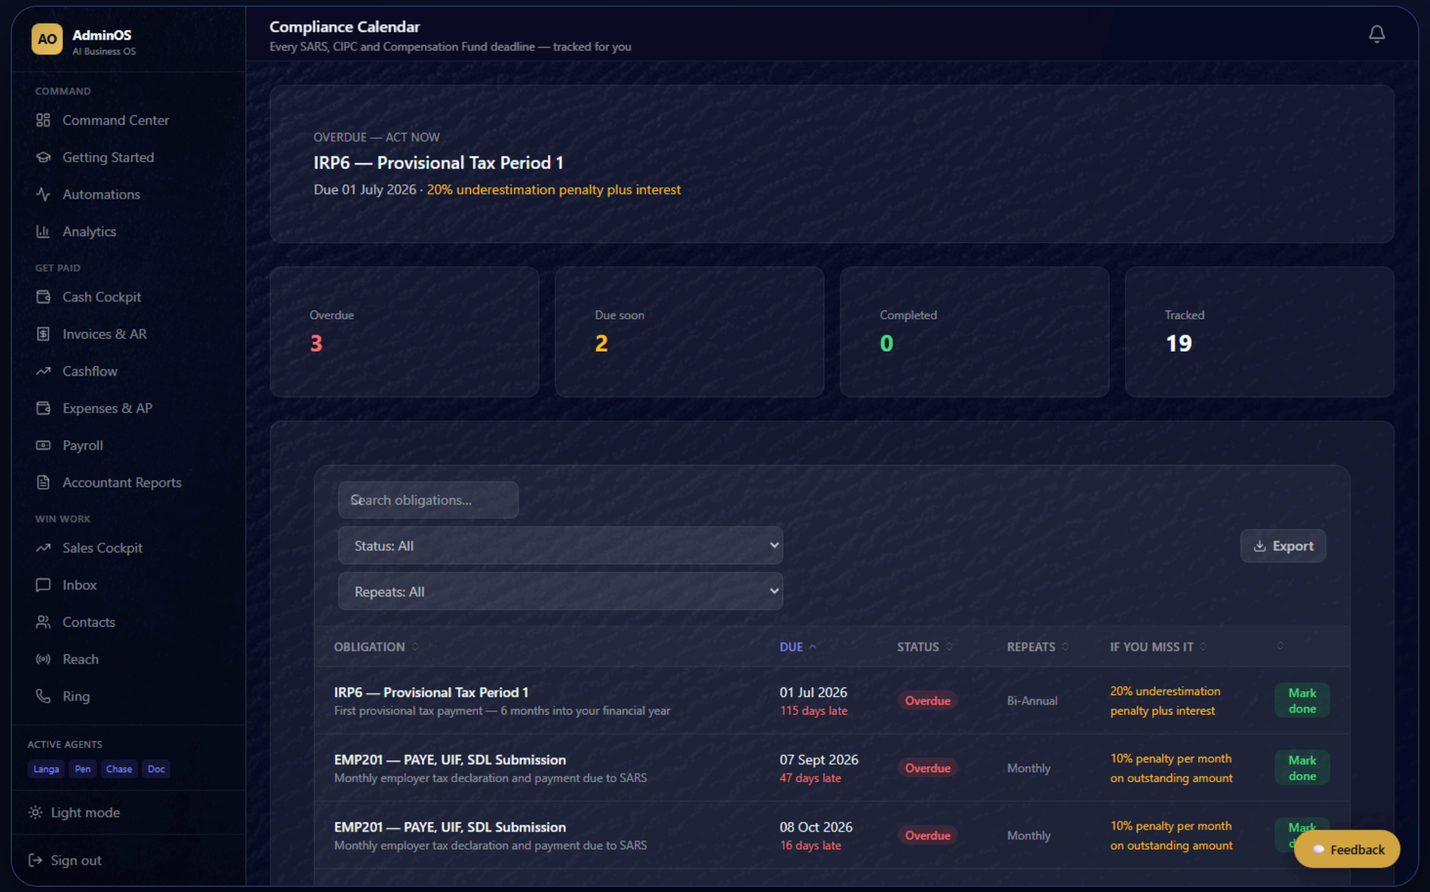

2 · STAY COMPLIANT

The fear every founder has — answered in one click.

- ✓ 19 SARS, CIPC and COIDA obligations, pre-loaded
- ✓ Dates built on SARS-verified rules, rolled forward monthly
- ✓ The actual penalty for missing each one
- ✓ POPIA consent built into every broadcast

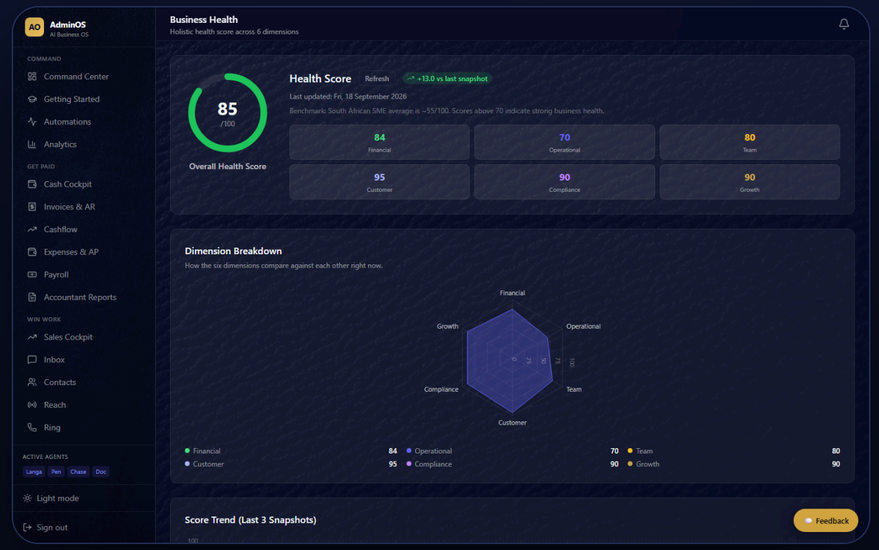

No other small-business tool knows what an EMP201 is.

3 · KNOW YOUR NUMBERS

Books in order from day one.

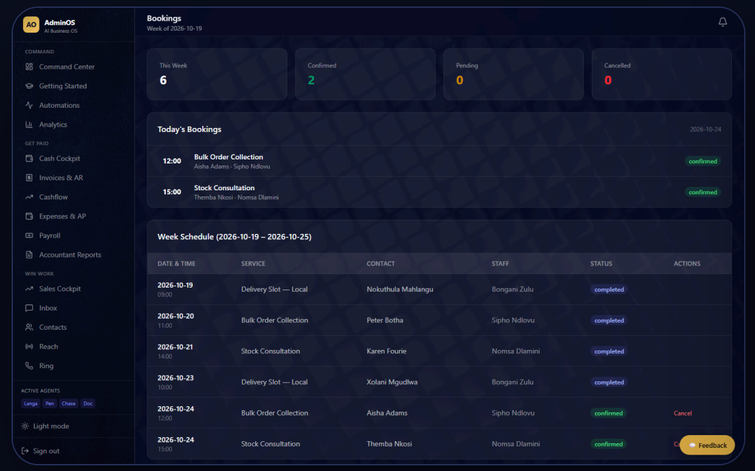

- ✓ Business health score and a daily brief
- ✓ **“Watch this week”**: the 3 things most likely to cost you money, each one tap from action
- ✓ A cash forecast that **learns how each customer actually pays**, labelled as an estimate
- ✓ Accountant-ready exports: income statement, VAT, journal CSV
- ✓ Payroll with PAYE, UIF and SDL

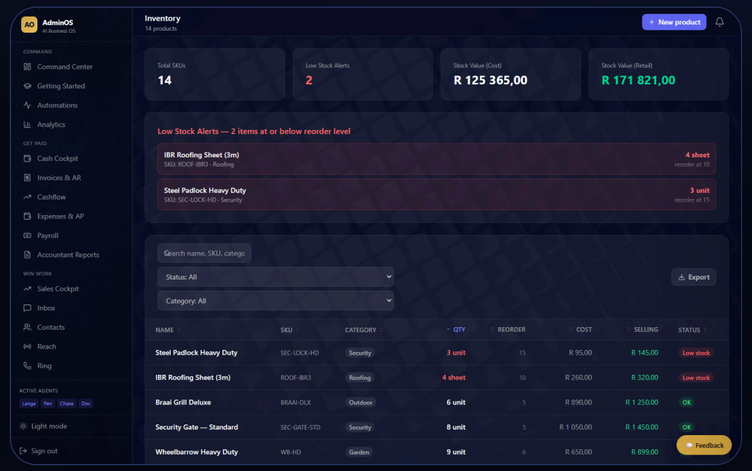

4 · GROW

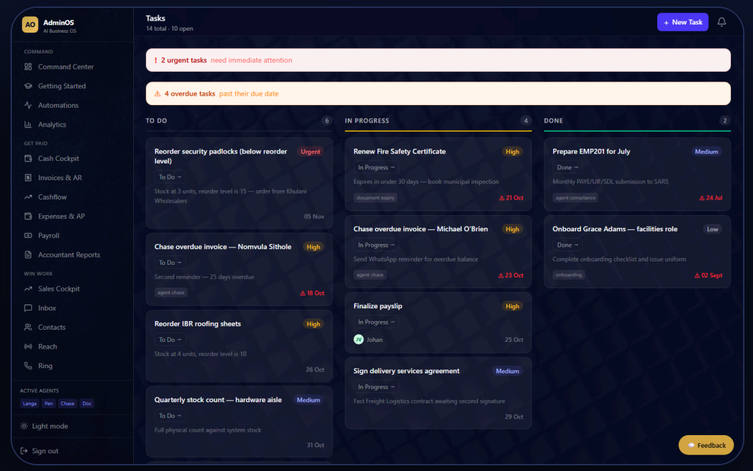

Run the whole business — not just the books.

Bookings & customers — a public booking link and a 24h reminder.

Stock & suppliers — reorder alerts and a B-BBEE supplier scorecard.

Team & tasks — staff, leave, tasks and goals with progress.

BUILT FOR HOW SOUTH AFRICANS ACTUALLY WORK

Designed for the mid-range Android on prepaid data.

WhatsApp-native

Customers, reminders and payslips travel on the channel everyone already uses.

4 languages

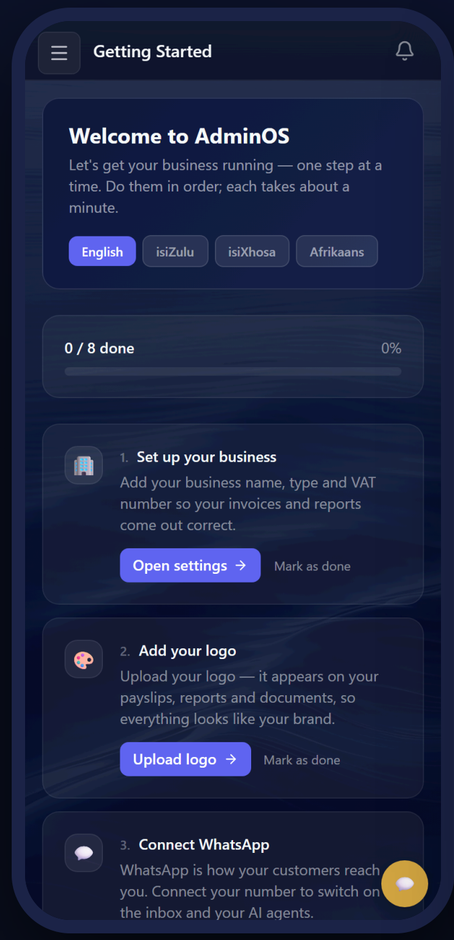

English, isiZulu, isiXhosa and Afrikaans — including the onboarding guide.

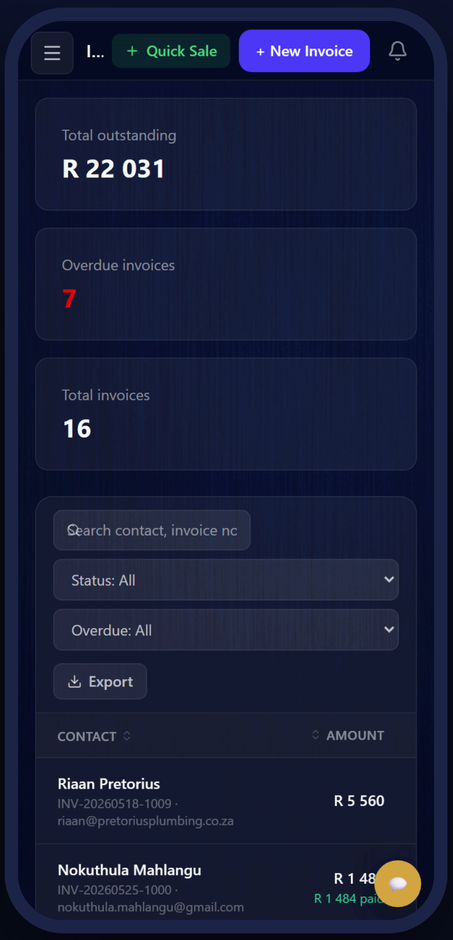

Load-shedding ready

PWA with offline queue — actions retry when the signal returns.

Staff app

Expo Android app prepared for Google Play and Huawei AppGallery.

PROOF IT'S REAL

Not a prototype. A product in production.

50+
dashboard screens, live at adminos.co.za

273
automated tests passing

122/122
checks passed walking 7 industry personas on production

38
background automations (reminders, recovery, rollovers)

🔒 Tenant isolation
Row-level security on every table; money tables reachable by the server only; a regression gate checks who can see what, per role.

👩🏾‍💼 A real first user
A Johannesburg video-production founder runs her business on it today.

⚖️ POPIA by design
Consent layer for outbound messaging; no raw database errors ever reach users.

TRUST · SECURITY & POPIA

Your customers' data stays yours — and apart.

🔒 One business can never see another

- ✓ Row-level security on every table; the public database key can read nothing sensitive (exposure closed and checked, Oct 2026)
- ✓ Bank lines, payments and payroll are reachable by our server only, never from a browser
- ✓ Every request is role-checked before any data is read; staff see only their own day
- ✓ A regression check walks 7 industry personas on production: 122 of 122 checks passed
- ✓ Signed webhooks, safe redirects, security patches applied; no raw database errors reach users

⚖️ POPIA, built in

- ✓ Information Officer registered with the Information Regulator
- ✓ Consent checked before any outbound marketing message; customers can opt out
- ✓ Soft-delete and an audit trail on every change; accounts can be deleted and purged
- ✓ Personal data minimised: AI helpers get no direct database access
- ✓ Privacy policy being updated to list every operator and cross-border transfer (s72) **In progress**

WHERE A BANK MAKES THIS UNSTOPPABLE

From “books in order” to “ready for credit.”

CAPABILITY	WHAT IT UNLOCKS FOR A YOUNG FOUNDER	STATUS
Invoices, receipts & cash sales	A clean, categorised record of every rand earned	Live
Compliance calendar & payroll	Proof the business is registered, tax-aware and trading properly	Live
Bank-statement import & reconciliation	Upload an FNB, Capitec, ABSA, Standard Bank, Nedbank or Tyme CSV; lines categorise themselves and payments settle the invoices they paid	Live
Pay-from-invoice	Customers pay the invoice from their banking app; it marks itself paid	Next
Credit-readiness profile	Consented, shareable view of cash flow, compliance and trading history for lenders	Next

The data flywheel: the more a founder runs through AdminOS, the more provable — and bankable — the business becomes.

BUSINESS MODEL

Priced for a founder’s first R349, not an enterprise budget.

Solo

R349

per month · 1 person

Grow

R899

up to 5 staff · all 6 AI agents

Operate

R1,999

up to 20 staff · payroll & compliance

Scale

R3,999

up to 100 staff · multi-branch

14-day free trial · add-ons: AI voice receptionist, WhatsApp broadcasts, client portal, extra languages · billing in ZAR.

Distribution: bank, incubator and funder partnerships — one partner brings a cohort of founders onto the platform.

MARKET VALIDATION

Early signal is strong. Here is how we prove it.

What we have heard so far

- ✓ **FNB hackathon panel, 2 of 2:** “can use” and “can buy”. One would pay the full price, one half price
- ✓ “Your strong point is the pricing… unique and specific to South Africa.”
- ✓ A Johannesburg founder runs her business on AdminOS today
- ✓ Fair challenge from the panel: similar tools exist. Ours is built and priced for South Africa from day one: ZAR, SARS, POPIA, WhatsApp, four languages

What we test next Planned

- ✓ A short “what would you pay?” survey to every beta founder, per tier
- ✓ Three pilot cohorts with incubators and funders, tracking trial → paid
- ✓ Half-price signal: test a lighter Solo tier and an annual discount against the R349 plan
- ✓ Measure what matters: days from invoice to cash, owner hours saved, 90-day retention

THE ASK

Help us put a business OS in the pocket of every young South African founder.
